IF WE NEED TO JOIN THE CONTENT FROM TWO OR MORE TABLES, WE CAN DO IT WITH A FORMULA IN EXCEL

SO INSTEAD OF (MAYBE) JOINING TABLES IN ACCESS, WE CAN COMBINE TABLES IN EXCEL

THE FORMULA HAS FOUR PARTS:

Lookup-value: What **do we want to look up?**

Table range: Where do we want to look it up?

Index no: What would we like to get as an answer?

Type of match: Do we need an exact answer?
